

Dear Mr. Swift.

I am writing to complain about the environmentally harmful practices of the local population and the negligence of the council in not taking measures to make our city greener. Trees are cut down a lot these days, our city is almost empty of trees, moreover, garbage fills the streets.

I suggest it would be a good idea if the council put up a fence around the trees and provide for recycling.

With best wishes: Nada Ibrahim

Dear Editor,

I am writing to complain about the environmentally harmful practices And the impact on marine life Throwing waste at the bottom of the sea affects the life of living organisms and may lead to their poisoning and then death

We can stop people from littering by using less single-use plastics, recycling properly, participating in beach cleanups, and supporting organizations that tackle environmental pollution.

I suggest It is incumbent on the council to punish the person who throws garbage by paying a high sum of money or by imprisoning him

Yours sincerely Danah Mohammed

Dear Editor ,

I am writing to complain about the environmentally harmful And neglecting some concerned parties or individuals with damage,failing to take measures to make our neighborhoods greener.

which is the presence of discarded or damaged vehicles on the edges of the streets or in the internal neighborhoods,and iwould like to clarify what these damaged cars and structures distort the aesthetic view of the city, in addition to that they may be a hotbed for animals and waste.

First of all we can take advantage of iron by remanufacturing or recycling it, so why do we see you dirt and all this is useless?

I suggest to save the environment ,The concerned must pay attention and monitor for violations and severe penalties in order to reduce this visual pollution, damage printing and create larger areas for vegetables.

With best wishes: Rudainp

Yours Sincerely

Trees removal

Dear Editor,

I am writing to complain about the environmentally harmful practices For workers and companies working in the matter, their negligence is that it harms people and most importantly the environment and makes it less green

And deforestation rarely decreases, so if they need it, they go to forests that are not known and have a strong impact in cities or regions.

Trees are also involved in protecting humans from the heat of the atmosphere, and building birds' nests on them (and this helps to preserve the environment of vital life and environmental life).

I suggest to put manufactured plastic trees instead of living trees and then prune them, thus saving money and effort and they are not wasted...

Some of the trees that have been pruned

slovakia

Southern Finland
