

HOW A FAMILY CAN LIVE OFF THE GRID ?

By : Remas mohamad

WHAT LIVE OFF THE GRID MEAN ?

Being off the grid means not being physically hooked up to utilities by wires, pipes or cables. Off-grid homes therefore rely completely on their own energy sources, which can often be renewable energy sources such as the sun and the wind.

LOCAL ELECTRICITY SUPPLY

ALTERNATIVE TO IT :

Solar power Generating electricity from sunlight. This may be done directly using photovoltaic panels.

MOST CHALLENGING :

Preserving foods in the freezer, air conditioning and light...

DOES THIS APPEAL TO ME?

Of course, **I can't** do without electricity, but if I have to, I'll behave because it's important in our life.

COOKING AND HEATING GAS

ALTERNATIVE TO IT :

Wood stove it's Super effective using any of these eco-friendly Wood stove, it's highly portable, and easy to use.

MOST CHALLENGING :

The tiny particles in wood smoke can be carcinogenic, and they can lead to and exacerbate heart disease, lung disease, and asthma.

DOES THIS APPEAL TO ME?

Yes, sometimes it can be adopted on trips and camping, but I do not think that I would adopt it in my life in general

LOCAL WATER SUPPLY

ALTERNATIVE TO IT :

rainwater, or stormwater, recycled water.

MOST CHALLENGING :

It may also contain traces left by animals such as birds. Or if the roof or drainage is old.

DOES THIS APPEAL TO ME?

Yes, and this helps to significantly reduce the household water bill, as rainwater can be used to irrigate green spaces and clean external surfaces.

WHICH IS THE EASIEST/HARDEST TO DO WITHOUT?

In my opinion, **local electricity supply** is the most hardest because it is essential in our lives and through it all daily needs can be implemented. As for the easiest, it is **local water supply**, because it saves a lot of money, rationalizes water, and encourages agriculture as well.
